The inverter's job is to turn power from DC to AC. 12V solar panels are applicable for small size solar system projects for: Most RV and motorhomes already have 12V batteries for AC, refrigerator, water heater control and lighting. So it makes perfect sense to use 12V for these type of systems. Can a 12V solar panel use a 24V inverter? A 12V solar panel must use with a 12V inverter and a 24V solar panel must use with a 24V inverter. On top of that a series connection is required to maintain the same voltage between the battery, inverter and the solar panel Check out 12V, 24V and 48V inverters here. To keep things simple, just remember to keep the voltage the same. How do I choose the right 24V inverter? Choose the right 24V inverter by adding up the wattage of the devices you want to run, then match it with one of our models. Shop now at RoadKing and get the power you need wherever your journey takes you. Can a 220V inverter be used in series? Re: 220v from two inverters? You can put in series (two 120 VAC units into "one" 240 VAC w/ neutral unit), if the units you have have been designed for synchronized operation (I believe, with an external control cable that runs between the two units--such as some Outback units will). Can a 240 volt inverter be used with two 240V inverters? You could use two inverters and tie their neutrals together. Most of better ones won't care about this. The trick is if you have any 240vac loads they could have any voltage from 0 to 240v as the two inverters won't likely be in sync or stay in sync with one another, even matching ones. I would go the T240 / transformer route.
