When could residential energy-storage installations exceed 2,900 MWh? Annual installations of residential energy-storage capacity could exceed 2,900 MWh with projections showing further cost reductions by 2030. The more residential energy-storage resources there are on the grid, the more valuable grid integration may become. How much energy can a ESS unit store? Individual ESS units shall have a maximum stored energy of 20 kWh per NFPA Section 15.7. NFPA 855 clearly tells us each unit can be up to 20 kWh, but how much overall storage can you put in your installation? That depends on where you put it and is defined in Section 15.7.1 of NFPA 855. What does NFPA 855 mean for energy storage systems? Specifically, we're focused on spacing requirements and limitations for energy storage systems (ESS). NFPA 855 sets the rules in residential settings for each energy storage unit--how many kWh you can have per unit and the spacing requirements between those units. First, let's start with the language, and then we'll explain what this means. How far apart should storage units be positioned? Therefore, if you install multiple storage units, you have to space them three feet apart unless the manufacturer has already done large-scale fire testing and can prove closer spacing will not cause fire to propagate between adjacent units. How far should ESS units be separated from each other? In Section 15.5 of NFPA 855, we learn that individual ESS units shall be separated from each other by a minimum of three feet, unless smaller separation distances are documented to be adequate and approved by the authority having jurisdiction (AHJ) based on large-scale fire testing. How many kWh can a house use? The diagram also shows that if you're inside the home, you can go up to 40 kWh; if you're outside the home on the wall, you can go up to 80 kWh; and if you're in a garage, you could also have 80 kWh there. All locations will require multiple units to reach the 40/80 kWh limit, which is fine as long as they're adequately spaced per this code.
