What is energy storage cabinet? Energy Storage Cabinet is a vital part of modern energy management system, especially when storing and dispatching energy between renewable energy (such as solar energy and wind energy) and power grid. How to design an energy storage cabinet? The following are several key design points: Modular design: The design of the energy storage cabinet should adopt a modular structure to facilitate expansion, maintenance and replacement. Battery modules, inverters, protection devices, etc. can be designed and replaced independently. Why do energy storage cabinets use STS? STS can complete power switching within milliseconds to ensure the continuity and reliability of power supply. In the design of energy storage cabinets, STS is usually used in the following scenarios: Power switching: When the power grid loses power or fails, quickly switch to the energy storage system to provide power. What type of batteries are used in energy storage cabinets? Lithium batteries have become the most commonly used battery type in modern energy storage cabinets due to their high energy density, long life, low self-discharge rate and fast charge and discharge speed. What is a 30kW photovoltaic storage integrated machine? Among them, the 30KW photovoltaic storage integrated machine has a DC voltage of 200~850V, supports MPPT, STS, PCS functions, supports diesel generator access, supports wind power, photovoltaic, and diesel power generation access, and is comparable to Deye Machinery. The Energy Management System (EMS) is the "brain" of the energy storage cabinet. Why should energy storage systems be optimized? As the global demand for clean energy increases, the design and optimization of energy storage system has become one of the core issues in the energy field. This article will introduce in detail how to design an energy storage cabinet device, and focus on how to integrate key components such as PCS (power conversion system), EMS (energy management system), lithium battery, BMS (battery management system), STS (static transfer switch), PCC (electrical connection control) and MPPT (maximum power point tracking) to ensure efficient, safe and reliable operation of the system.
